

Jenkins Health Advisor by CloudBees

Plugin Information

View Health Advisor by CloudBees [on the plugin site](#) for more information.

Older versions of this plugin may not be safe to use. Please review the following warnings before using an older version:

- [CSRF vulnerability and missing permission checks](#)

Jenkins Health Advisor by CloudBees (formerly known as "CloudBees Jenkins Advisor") proactively notifies you of problems with your Jenkins-based environment. Jenkins Health Advisor by CloudBees identifies numerous issues before they affect your users, including security vulnerabilities, performance problems, and plugin version issues. Best of all, Jenkins Health Advisor by CloudBees is constantly being improved by the [CloudBees Support](#) and Engineering teams to cover the most recent identified issues.

By default, you'll receive a summary email whenever a new problem is identified in your Jenkins instance, and whenever one or more of the problems affecting your instance has been resolved. You can configure the email address Jenkins Health Advisor by CloudBees uses in the Configuration section.

Initially, Jenkins Health Advisor by CloudBees sends an initial report that lists everything it detects in your system. Subsequent reports will only report changes from the initial report. It's important to note that Jenkins Health Advisor by CloudBees only emails you if it finds something wrong: if it doesn't find any problem in your system, it won't send you email.

Jenkins Health Advisor by CloudBees identifies problems by scanning a [Support Bundle](#) from your Jenkins master. The Support Bundle is generated on a daily basis by the plugin and submitted to servers hosted by CloudBees. For instructions on defining the types and kinds of data to include in the Support Bundle, see the Optional Configuration section in the [documentati on...](#)

Configure Jenkins Health Advisor by CloudBees

[Jenkins Health Advisor](#) automatically analyzes your Jenkins environment and proactively alerts you of components needing attention with detailed email reports.

As issues are detected in your master, Jenkins Health Advisor by CloudBees will send new reports to your email address.

Jenkins Health Advisor by CloudBees has been successfully connected.
