

Javadoc Plugin

Plugin Information

View Javadoc [on the plugin site](#) for more information.

This plugin adds Javadoc support to Jenkins. This functionality used to be a part of the core, but as of Jenkins 1.431, it was split off into separate plugins.

The plugin enables the selection of "Publish Javadoc" as Post-build action, specifying the directory where the Javadoc is to be gathered and if retention is expected for each successful build.

Change Log

Version 1.5 (Mar 06, 2019)

- [JENKINS-32619](#) - Fix javadoc presentation for java 11 generated reports
