

# Ruby Plugin

## Plugin Information

No information for the plugin 'ruby' is available. It may have been removed from distribution.

This plugin will let users use [Ruby](#) in the build scripts.

The plugin works like Shell builder. To use, you just enter the Ruby scripts in the text area and save. During build the Ruby interpreter (defaults to 'ruby') will be used to execute the scripts you previously entered.

### Build

- Execute shell
- Execute Windows batch command
- Invoke Ant
- Invoke top-level Maven targets
- Execute Ruby script

Script

#Your ruby code goes here

See [the list of available environment variables](#)

It is expected that Ruby interpreter 'ruby' is made available to system PATH.

## Change Log

Version 1.2 (Jan 31, 2010)

- Update code for more recent Hudson

Version 1.1 (Jan 26, 2008)
