

DOS Trigger

Plugin Information

View DOS Trigger [on the plugin site](#) for more information.

This plugin allows to trigger a build with a DOS script.

Description

The script will run according to the schedule you enter.

When the script sets the **cause** variable to something other than the empty string a build will be started (with the given 'cause').

Caution: This plugin always uses the default workspace, even if a custom workspace was defined.

Screen Shot

Build periodically

Poll SCM

Poll with a Windows Batch Command

Schedule: *****

Trigger Script:

```
set x=%RANDOM%
if %x% less 10000 {
  set cause=%x% is less than 10000
}
```

Build

After making this example I discovered that the DOS %RANDOM% construct is far from random, don't use it at home 🤖

Change Log

V1.23 @ 08-20-2011

- Fix help link
- Internal restructuring

V1.21 @ 06-02-2011
