

Associated Files Plugin

Plugin Information

View Associated Files [on the plugin site](#) for more information.

This plugin allows for marking files or directories outside of Jenkins as related to a build.

This plugin allows you to specify a list of files and/or directories to associate with a given build, in that job's configuration. This is to associate files /directories outside of Jenkins which are still produced/controlled/etc by the build in question with that build. They will be reported alongside archived artifacts on the build page, and will be deleted when the build itself is deleted.

Releases

Version 0.2.0

- Released March 23, 2012
- Export associated files information in Jenkins API.

Version 0.1

- Released December 23, 2011
- Initial release.
