

Last Success Version Column Plugin

Plugin Information

View Last Success Version Column [on the plugin site](#) for more information.

Adds a column showing last successful version that can be configured in views.

This simple plugin adds a `Last Success Version` selection when configuring the columns for views. The idea is that it parses the description of the last successful build for `[version]` and uses the text after that as the version number of the build. It also shows the date the event happened on (rather than the time since the last one). If the build description does not have a version number in it then it shows the Jenkins build number.

To set the build description use [Description Setter Plugin](#).

Changelog

Version 1.1 (02/Nov/2011)

- JENKINS-11585

Version 1.0 (25/Nov/2009)

- Initial release.
