

Show Build Parameters Plugin

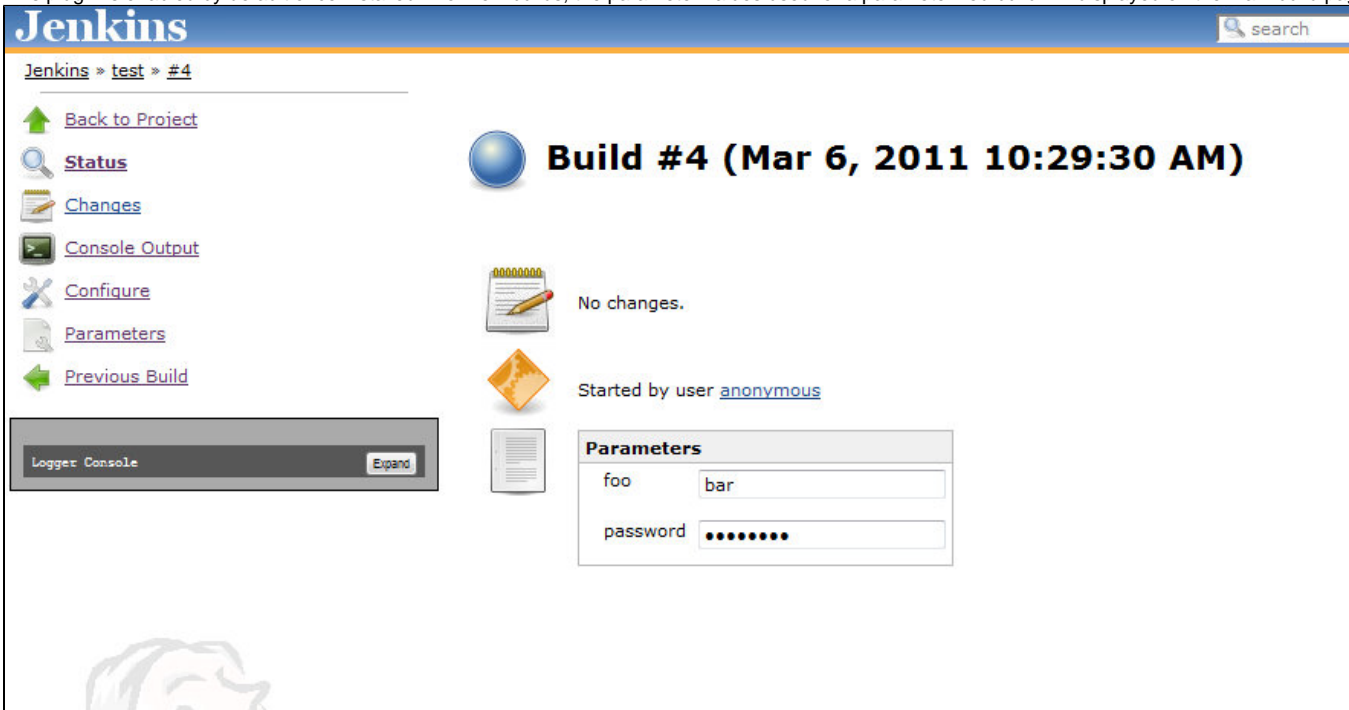

Plugin Information

View Show Build Parameters [on the plugin site](#) for more information.

Show the parameters used for a build on the main build page

Usage

This plugin is enabled by default once installed. For new builds, the parameter values used for a parameterized build will displayed on the main build page.

The screenshot shows the Jenkins interface for a build. The top navigation bar includes the Jenkins logo and a search box. The breadcrumb trail is "Jenkins > test > #4". A sidebar on the left contains links for "Back to Project", "Status", "Changes", "Console Output", "Configure", "Parameters", and "Previous Build". The main content area displays "Build #4 (Mar 6, 2011 10:29:30 AM)" with a blue globe icon. Below this, there are two status messages: "No changes." with a notepad icon and "Started by user [anonymous](#)" with a person icon. A "Parameters" section is visible, containing two input fields: "foo" with the value "bar" and "password" with masked characters. At the bottom left, there is a "Logger Console" box with an "Expand" button.
