

TestQuality Updater Plugin

Plugin Information

View TestQuality Updater [on the plugin site](#) for more information.

This plugin allows you to automatically upload test results to TestQuality for further analysis.

Usage

In order to upload test results you will first have to create a Test Plan in TestQuality. Each testing job in Jenkins should get its own Test Plan. Otherwise the system might assume tests have been removed when alternating between different test results with different tests.

Setup

Under Manage Jenkins > Configure System.

TestQuality Updater

TestQuality Url

Username

Password

Fill in your username and password for TestQuality and push Test Connection.

For the Jenkins job, add a Post-build Action. Choose TestQuality Updater.

TestQuality Updater	
Project	<input type="text" value="PJ2 TestQuality Demo"/>
Test Plan	<input type="text" value="P14 Karma UI Unit Tests"/>
Milestone	<input type="text" value="Optionally Pick Milestone"/>
Test Results XMLs	<input type="text" value="testQualityApp/test-results/karma/PhantomJS_2.1.1_(Linux_0.0.0)/*.xml"/>

Select Project, Test Plan and Milestone. The Test Results XMLs, works the same as JUnit Test Result plugin.

Changelog

Version 1.0

Initial version also for automatic upload of test results.

Version 1.3

Bug fixes.
