Authentication Tokens API Plugin

This plugin provides an API for converting credentials into authentication tokens in Jenkins.

The plugin provides concepts for:

- Authentication Token Source: converts a type of Credentials into authentication tokens of a certain type.
- Authentication Token Context: used to specify the context in which the token wants to be used through a series of purposes.
- AuthenticationTokens utility class to generate matchers and convert credentials into tokens easily.

Version History

Version 1.3 (17/Jun/2016)

- [JENKINS-35287](#): Upgrade to 2.9 parent POM.

Version 1.2 (7/Sept/2015)

- Add concept of authentication token context to specify the context in which the token wants to be used.
