

Node Name Column Plugin

Plugin Information

View Node Name Column [on the plugin site](#) for more information.

Adds column showing node name and can be configured in views.

This simple plugin adds a Node Name selection when configuring the columns for views.

Change Log

Version 1.2 (21-October-2014)

- Read the assigned label directly from the Job instance rather than deserializing the job from disk for every page render (which is a major performance issue)

Version 1.1 (17-April-2010)

- Fix NPE for jobs not tied to a node (JENKINS-6286)

Version 1.0 (1-Feb-2010)

- Initial release.
