

Katalon Plugin

Plugin Information

View Katalon Studio [on the plugin site](#) for more information.

Katalon Plugin

This plugin will help download, deploy, and execute Katalon Studio on Jenkins servers automatically.

Tutorials

[How to use Katalon plugin for Jenkins on Windows.](#)

[How to use Katalon plugin for Jenkins on Ubuntu.](#)

Usage

- Install the plugin.
- Go to project *Configure > Build > Add build step > Execute Katalon Studio Tests*.
- Provide the Katalon Studio version to be downloaded and the command arguments for executing the tests. If you have installed Katalon Studio yourself, please provide its location in *Use pre-installed Katalon Studio*.
- Save the configuration.

Publish the JUnit reports

- Go to *Add post-build action > Publish JUnit test result report*.
- Set the value *Test report XMLs* to *Reports/**/*.JUnit_Report.xml*.
- *Latest Test Result* will be shown in the project page after every build.
