

# Browser Compatibility Matrix

Jenkins web browser support falls into one of three classes:

1. **Level 1:** Aim to proactively fix these browsers and provide an equal UX across all.
2. **Level 2:** Accept patches to fix issues and make a best effort to ensure there is at least one way to do any action.
3. **Level 3:** No guarantees. We will accept patches, but only if they are low risk. **This is the default unless a browser/version is listed below.**

 We do not claim any compatibility with, or accept bug reports and patches, for pre-release (e.g. alpha, beta or canary) versions of browsers.

Browser	Level 1	Level 2	Comment(s)
Google Chrome	Latest regular release		
Mozilla Firefox	Latest regular release Latest <a href="#">ESR</a> release		
Microsoft Internet Explorer	Version 11	Versions 9 and 10	Specific OS Versions?
Apple Safari	Versions 6 and newer	Version 5 release (OS X only)	

These rules were [adopted on 2014-09-03](#) for Jenkins 1.579 and up.

 Unless otherwise noted, only the latest minor release / patch level of each version is supported.

 Support for mobile browsers (e.g. iOS Safari) has not yet been determined
