

# VncRecorder Plugin

## Plugin Information

View VncRecorder [on the plugin site](#) for more information.

This plugin records screen of current build or other configured VNC session as Shock Wave Flash (swf) file during a build and stores it as an artifact. This plugin can be used in combination with [VncViewer](#) and [Xvnc plugin](#).

After the build, the video file gets also published as a HTTP link in the "Console output" of the build. The generated HTML file embeds a video and makes it possible to navigate within a recorded video directly in browser.
