

Chatter Notifier Plugin

Plugin Information

View Chatter Notifier [on the plugin site](#) for more information.

Older versions of this plugin may not be safe to use. Please review the following warnings before using an older version:

- [Unprivileged users with Overall/Read access are able to enumerate credential IDs](#)
- [CSRF vulnerability and missing permission checks allowed capturing credentials](#)

Allows users to send build results to [Salesforce Chatter](#) in a Post-Build step or to send custom text via a build / pipeline step.

Features

This is a plugin for Jenkins that will post build results or custom text during a build to a Chatter feed in Salesforce. You can configure it to post to a specific User (e.g. a build user), a specific group (e.g. a group that owns the build), or a specific record (perhaps you have a custom object that tracks build configs).

Minimum Requirements

This plugin requires at least version 1.22 of the [Credentials Plugin](#).

Configure

1. Install the Chatter Plugin using the Jenkins Plugin Manager and restart the server
2. Create new credentials of the kind "Username with Password"
 - a. Remember to include your users API security token if needed as part of the password

3. Create or update a Freestyle Job:
 - a. Add post-build action -> Chatter Results **or** Add build step Post to Chatter
 - b. Populate the fields as needed (see the inline help for more details):
 - i. Credentials
 - ii. Optional server URL to login to
 - iii. Record id (record, user, or group) to post results to (leave this blank to post to the user's wall)

4. Add a step to a Pipeline Job:
 - a. Configure a step within the context of a node:
 - i. Example:

```
chatterPost body: "This is a Chatter post from a pipeline! ${env.JOB_NAME} ${env.BUILD_DISPLAY_NAME}", credentialsId: 'JENKINS_CREDENTIAL_ID', recordId: 'SOME_RECORD_ID'
```
 - b. See the [README in GitHub](#) or the [Jenkins Snippet Generator](#) for more information.

Changelog

v2.1.0

- Add a build step which can also be used as a pipeline step to post custom text to Chatter.

v2.0.5

- Security release to address a potential issue where any user with Jenkins.READ to invoke the method against a custom credentials-capturing server. It allowed leaking credentials if they were not scoped properly. It also allowed any attacker with Jenkins.READ to easily get a list of credential IDs vulnerable to the attack.

v2.0.4

- Utilize proxy configuration (authenticated and unauthenticated from Manage Jenkins Manage Plugins Advanced (No Proxy Hosts remains unimplemented))

v2.0.3

- Give contextual build status (FIXED, STILL FAILING)

v2.0.2

- Hosted on jenkins-ci.org
- Now requires at least version 1.22 of the Credentials Plugin
