Containers

This document describes instructions and notes that are *container specific*.

- Glassfish
- Tomcat
- JBoss
- IBM WebSphere
- Jetty
- Jonas
- Weblogic
- Apache Geronimo 3.0
- Liberty profile

And finally, if you are having difficulty installing Jenkins with a container, you can always run Jenkins just by itself: `java -jar jenkins.war` (which uses Jetty)

Please help us grow this list by contributing notes to this Wiki.
