

Variant Plugin

Plugin Information

View Variant [on the plugin site](#) for more information.

See

<https://github.com/jenkinsci/variant-plugin>

This library plugin allows other plugins to behave differently depending on the "environment" where they run.

@OptionalExtension and @OptionalPackage annotations can be used to define a set of required:

- Plugins.
- Classes.
- Variants.

These variants can be activated through:

- JENKINS_VARIANT environment variable.
- Jenkins-Variant attribute in META-INF/MANIFEST.MF in the WAR file.
- Files in \$JENKINS_HOME/variants folder.

Version History

Version 1.2 (2019-02-15)

- <https://github.com/jenkinsci/variant-plugin/pull/3> Internal compatibility fix for *Plugin Compatibility Tester* execution.
