

Purge Build Queue Plugin

Purge Build Queue Plugin

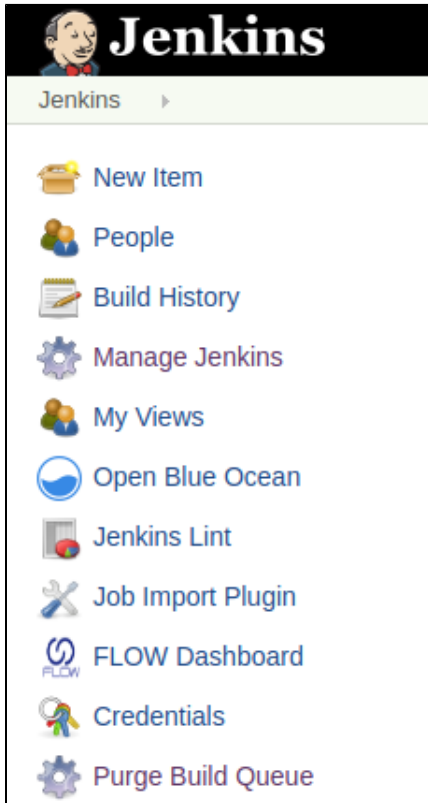

Plugin Information

View Purge Build Queue [on the plugin site](#) for more information.

This plugin provides a mechanism to delete all jobs from the build queue at once.

Ordinarily, you can only remove jobs from the build queue one by one. This is inconvenient when the build queue contains many jobs.

This plugin adds a *Purge Build Queue* button to the top-level Jenkins page.

Click *Purge Build Queue* to clear all jobs from the build queue.

Changelog

1.0 (released 2011-08-25)

- fully I18N
- initial implementation
